<序文>

The growth in home health care services in Japan since the 1990s and the enactment of long-term care insurance have resulted in a large increase in the number of home-care beneficiaries, primarily diagnosed with neurological and cerebrovascular diseases. With the shift of care from public facilities to the home milieu, the critical need to assess the effectiveness of home care services in our society has been underscored. Thus, in order to assess the effectiveness of health care services for home-care neurology patients, we developed the multi-dimensional outcome indicators, and assessed the neurology patient's outcomes using these indicators based on a follow-up study. We thank Prof. Makoto Iwata (Director of department of Neurology, Dean of School of Medicine, TWMU), for his support in this research project. We also thank JSPS Grant-in Aid for Scientific Research, for awarding grants.

Contents

Research I: Model Specification and Testing of Outcome Indicators Used for Assessment of Healthcare Service for Home-Care Neurology Patients..... 1

Introduction..... 2

Subjects and Methods..... 3

Procedure of data collection..... 3

Sample characteristics..... 4

Outcome indicators for assessing the effectiveness of home care service for neurology patient..... 5

1) Definition of outcome indicator..... 5

2) Scale development..... 6

Measures..... 7

1) Measurement of Activities of Daily Living..... 7

2) Health-Related Quality of Life measurement..... 7

Statistical analysis..... 8

1) Consistency reliability..... 8

2) Factorial validity..... 9

3) Construct validity..... 9

4) Predictive validity..... 11

5) Clinical relevancy..... 12

Results

1. The scaling structure in the outcome indicators..... 12

2. Second-order factor model structure of outcome indicators by structural equation modeling..... 14

3. Relationship between the scores of outcome indicators and patient's profiles..... 17

4. Patient improvement and stabilization of the outcome indicators..... 17

5. Assessment of the predictive validity of the outcome indicators..... 19

1) Assessment using Multiple Indicators Model..... 19

2) Assessment by using General Linear Model..... 22

Discussion..... 24

References..... 29

Research II: Influences of symptoms and changes in physical disabilities on HRQOL in home-care neurology patients 31

Introduction.....32

Subjects and Methods.....33

Procedure and sample characteristics.....33

Measures.....34

1) Measurement of Activities of Daily Living.....34

2) Health-Related Quality of Life measurement.....35

3) Definition of symptoms.....37

Statistical analysis.....37

Results & Discussion.....39

1. Changes in Activities of Daily Living Measure.....39

2. Influences of symptoms on patient's HRQOL.....40

3. Influences of the level of physical disabilities on HRQOL.....41

4. Influences on HRQOL extended by the change in the level of physical disabilities over two years.....43

5. Linking clinical variables with HRQOL.....44
